## Samsung family hub apps

Samsung Family Hub 3.0 is at the heart of what turns their excellent fridge into something more. Instead of a refrigerator that just keeps your food, you can leave notes, get weather updates and more thanks to a 21-inch touchscreen that connects you to important things in your life. Samsung Samsung is betting that the center of each family is the kitchen. After all, where are you all going to wander to grab something to eat during the day isn't it? By adding a 21-inch touchscreen display to the right door of your fridge, they've given you a way to stay in touch with everyone and everything that's going on in your life. Family Hub is basically that touchscreen and everything it can do. While the ability to use the touchscreen and have access to apps was available in earlier Samsung Smart Fridges models, Family Hub 3.0 added full Bixby voice integration. Family Hub allows you to access entertainment such as music programs, leave notes for family members, access Samsung SmartThings located in your home, and even look inside the refrigerator without ever opening it physically. Since Samsung's smart fridge works on TIZEN OS, it has access to all sorts of things you never thought your fridge would take advantage of. With Tizen there are dozens of different applications that you can choose from. This includes including Bixby, access to Pandora, leaving memoranda on the fridge and a lot more. It also means that once you connect your fridge to a Wi-Fi network in your home, you'll get access to new apps when they become available. There's no real way to know what can appear as available as it all depends on what developers do with Tizen. Samsung Smart Fridge is practically crowded with features. Not all of them live exclusively on your fridge either. To that end, we've smashed many, many things this

fridge can do on the list. It still doesn't cover absolutely everything because Samsung has gone out of its way to think about everything you want your fridge to do. However, this is good ground on what you will get if you invest in this smart fridge in your home. Cameras: Samsung Smart Fridge includes 3 cameras on the inside of the fridge. Using a touchscreen, Bixby or SmartThings app, you can peek inside the fridge to see what food you've actually hidden there. Food management: The most important aspect of the fridge is the food inside it. You can order groceries through a delivery service, plan meals based on what food you have in stock, use Bixby to add products to your shopping list, include automatic expiration dates that let you know when something has gone bad. You can even order with GrubHub if you don't have what you need, but you should feed the family as soon as possible. Stay connected: Family Hub aims to help your family is more connected to each other than ever before. You can personalize widgets that always appear on the touch screen, sync everyone's calendar, leave notes and notes for one remotely post photos and lots more depending on what you need from Family Hub.Yourself: cooking and spending time in the kitchen takes time, but it doesn't have to be boring. With Family Hub, you can listen to Pandora or iHeartRadio to dance while baking, see what's happening in the rest of the house using the SmartThings app, and even watch TV using a Samsung phone for mirrored screens. Even more features: Besides connected features, your Samsung Smart Fridge does even more stuff. You can digest your shelves for weird items of size, take advantage of the wine counter in the fridge with specific temperature dials, and even turn the entire fridge into a freezer at the touch of a button. Given the 28 cubic feet of space this giant fridge has, it's nothing to mock. Not every fridge would work for each person, and Samsung certainly knew that when they delivered three different Samsung Smart Fridge models. There are three different models for you to choose from, each with its own perks. Of course, all three models come with Family Hub 3.0, and all it has to offer is to lift your kitchen from room to center of your family. Thank you for let us know! Tell us why! Today, the winter solstice in the Southern Hemisphere, marking the shortest amount of daylight days and the longest night of the year. The pagan celebration of the Winter Solstice is one of the oldest winter holidays in the world. In historical times, the winter solstice was extremely important because people depended economically on monitoring the progress of the seasons. Because of this, many ancient people had great reverence for the sun. Key archaeological sites including Stonehenge are believed to have been used to celebrate the winter solstice as its formation is carefully aligned in such a way that it points to the sunset over the winter solstice. Around the world, the interpretation of the event varied across cultures, with different festivals and rituals observed. Pagan Scandinas and Germans of northern Europe celebrated the twelfth Mid-Winter Solstice called Yule, the tradition of which now exists in many modern European Christmas celebrations. Nowadays, the Iranian people celebrate the northern winter solstice as Yalda Night, where families come together to eat and drink and read poems. The Chinese festival Dongzhi marks a time when winter darkness begins to be a place of light. While we can't follow any of these traditions in Australia or New Zealand, the day still offers a sense of energy and mystery. Why not celebrate the day by using it as a time to clean your home or office from negative energy? There are many different opinions on how to do this, so we have collected the most popular: smearing The practice of burning herbs is common to many cultures, and is one of the oldest methods of human cleansing or Here you take dried grass like a sewing or sandal and just light up a small corner, and blow it up. Go around an area that needs cleaning, and let the smoke get into every corner of the room. Learn more about the 10 best herbs and spices for your Go Green health! Surrounding yourself with nature has constantly proven a positive health benefit, and is often used in Feng Shui to create positive energy. In winter, we are often chained indoors. Why not benefit nature indoors and invest in some houseplants? Learn more about key houseplants that can help clean the air Burn Essential Oils Essential oils have been used since ancient times to help release negative energy and promote positivity. They can be burned as aromatherapy, and used in the bath or for massage. Lavender oil can alleviate insomnia and nervous tension, while orange essential oil is a great pick me up. Read more about the health benefits of essential oils here Embrace of the Sun Why not make light pagan and celebrate the sun today? Natural light does wonders for our mental health and well-being. Maximize natural light by opening windows, removing furniture if they block the road and cover with light, natural draperies to allow the greatest amount of sun to enter. If you live in a small apartment that doesn't get much sun, maximize what little you get by putting mirrors and using the power of reflection to create a sense of light in dark areas. Learn more about the benefits of covering the winter sun here Apps like web browser and TV mirror seem to offer the fringe utility at best, while others just seem redundant (two recipe apps? two grocery delivery apps?) and no, you can't uninstall any of these apps (or download different ones), but you can at least drag and drop those you don't use as much to the second screen. The Zoom ImageThe Family Hub fridge had the SmartThings app back in January, at CES. Ngo? Not so much. Ry Crist/CNET Some app icons are bigger than others, with a handy, lively control from the home screen over things like sound playback and fridge temperature. I would have liked more customization options. You can't resize any of the icons, nor can you give any individual photos or whiteboard notes of your own space on the home screen. It's also worth noting that there's no SmartThings app to manage connected home devices. The ability to sync with SmartThings and turn lights and smart switches off from the fridge was part of the original Family Hub pitch - we even saw the app in action back in January when Family Hub CES debuted. This is an understandable bit of backpedaling given SmartThings' recent woes - and it should be disappointing given that Samsung spent \$200 million to acquire SmartThings in 2014.Voice control is another notable absence. When Samsung first told about the Family Hub refrigerator, the top point of the ball in the list of features was the integration of Alexa. The plan was to build Amazon's virtual assistant directly into the fridge, making it something of a huge Amazon Echo Echo in your kitchen. It sounded like a great idea given how many people enjoy using the Alexa device in their kitchen to listen to music and set cooking timers, but when CES arrived, Alexa was nowhere to be seen when Samsung unveiled the fridge. Now Samsung only says that alexa integration is an opportunity for further traffic along the way. Maybe that means they decide to wait and see what happens to Google competitor Amazon Echo later this year, but it's hard to tell. At the moment, at least, the built-in microphone of the refrigerator is good only for recording voice memos in the White Board app. The four-door Concept FridgeThe Family Hub Fridge is samsung's fourth four-two-door fridge, and one of five available from major manufacturers (the fifth is a competitor from LG, which also has a sixth on the way). Interestingly, the Family Hub refrigerator is not the most expensive of these four-door options. That distinction still moves to Samsung's gourmet-focused Chef Collection refrigerator, its first four-door model. All of these refrigerators are a play from the same buyers who upgraded their fridges during the French door boom of the past 15 years or so. With many of these French door models starting to get a little long in the tooth, Samsung is betting that many of these consumers may be looking for an upgrade again. Tyler Lizenby /CNET I think the Family Hub refrigerator makes a lot of sense in this context. It's a attention-getter for the 4-door aspiring category. 4-door. many of us will never spend four or five thousand on this refrigerator, but if it catches the eye, then perhaps we'll look at a similar, less expensive version like Samsung's base 4-Door Flex models - ones that currently sell for about \$2,400.Like the rest of these four-door options, the Family Hub refrigerator offers plenty of storage space, with 16.4 cubic feet in the fridge and 11.5 cubic feet between two sections of freezing This means that the fridge section accounts for less than 60 per cent of the total capacity, which is typical of all these four-door models and is low compared to French door fridges, where fridges typically account for closer to 70 per cent of your total storage. However, I was able to put all our test products in the Family Hub fridge as well as all six of our big stress test items - although this is admittedly very tightly suited. To that end, the lower right compartment of the FlexZone fridge is a really clever addition as you can switch it from freezer to fridge and, in a pinch, give yourself an extra 5.75 cubic feet of fresh storage space. It performed remarkably well in my tests, too, with accurate, consistent temperatures in each of its five settings. The room was quite big and comfortable. By default, the 37-degree setting, the temperature was extremely consistent in the fridge case and in the freezer, too. The coldest parameter (34 F) held steady as well - although the temperature in the fridge barely came down from default altogether. I suspect this is due to the FlexZone compartment - I typed it into fridge modes during a 34-degree test to see how it would affect the main section of the fridge. It looks like it's faced with temperatures up by a degree or two. Zoom in on chris Monroe/CNET Image Is it really worth it? We had months and months to oh and oh over this flashy fridge - now finally it's time for a verdict. And like the final score of 8.5 may indicate, it's a good one. By all our indicators - performance, usables, functions and design - it's a very durable fridge, even for its price range. Among the four-door and upscale French door models, it's the best and most full-featured fridge we've come across. Some touch screen features seem redundant, but others, such as drag-and-drop timers, are legitimately useful. None of them are held by the user interface. So yes, I think the Family Hub is worth it - provided you're willing (not to mention able to) spend that much on the fridge to start with. you pay that much for the fridge because you want it to offer strong performance, unique, useful features, and great design. Even skeptical, The Family Hub checks all these boxes. Update, November 2: Added prices in the UK and Australia. Please note that the smaller A fridge freezer is also available in the UK, for £3,000. Page 2 Samsung's family hub refrigerator has retail price \$5,600 (you'll pay \$200 more for black stainless steel, and another \$200 for counter-disarming construction). For what it's worth, there's now a discount of up to \$4,300 at major retailers. It's obviously still an awful lot to spend on the fridge - for more information on whether it's worth it, read our full review. (The Family Hub fridge isn't yet available outside the US, but the starting price comes out to around £4,200, or approximately AU\$7,500. Similar Samsung models are without touchscreen or retail cameras at outlets such as Currys, John Lewis, and Appliance City in the UK for around £2,800 and at Harvey Norman's in Australia for around AU\$5500.) \$3,900 on Best Buy Read the Full Review Review
